

Electronic Tariff Filings, Docket No. RM01-5-000

Draft Tariff Filing Rules Table

The single topic meetings of August 9 through 18, 2005, are designed to discuss the translation of the Commission's tariff filing requirements into eTariff, including specifying the different filing types for each program the Commission regulates, and the required attachments for each tariff filing type.

Attached is a draft tariff filing rules table that will be used by the eTariff software to identify the different tariff filing types, the required attachments, and other conditions applicable for each tariff filing type and attachment.

The Rules Table will be managed by a FERC administrator, probably located within OMTR. When rules are modified to reflect changes in statutory requirements, Commission regulations or Commission policy, the changes will import into the Field software upon the Field software's next launch.

As discussed at the June 1, 2005 technical conference, it is staff's intent to post certain data that would permit third party software providers to write tariff creation and tariff filing compilation software that would create packages that may be imported into eTariff. The attached draft tariff filing rules table has data that may be used by third party software providers for this purpose.

This draft's format is not designed for third party software. Future posting will have a format more compatible for importing into another software product.
